Research Impact: 4,927 Google Scholar Citations | 44 Published Journal Articles | 3 Patents

ACADEMIC PROFILE

Interdisciplinary engineering researcher with 10+ years of experience in self-powered sensing, triboelectric and hybrid energy harvesting, flexible/wearable electronics, smart materials, embedded sensing, and cyber-physical monitoring. My research connects device physics and materials with system integration, real-time data acquisition, and application-driven validation. I have authored or coauthored 44 journal publications, presented at major international conferences, contributed to externally funded research programs, mentored undergraduate and graduate researchers, and served as a peer reviewer and guest editor. My long-term goal is to build an independent academic research program at the intersection of smart sensing, energy harvesting, intelligent instrumentation, and resilient engineering systems.

RESEARCH INTERESTS

Self-Powered Sensors and Triboelectric Nanogenerators • Hybrid Electromagnetic-Triboelectric Systems • Flexible and Wearable Electronics • Smart Textiles • MXene/Polymer Nanocomposites • Embedded Systems and IoT • Cyber-Physical Monitoring • Digital Twin-Enabled Sensing • Biomedical and Industrial Sensing

EDUCATION

Ph.D. in Electronic Engineering **2019**
Kwangwoon University, Seoul, South Korea
- Dissertation: Development of Human Body Induced Vibration Driven Hybrid Energy Harvesters using Halbach Magnet Array
- Supervisor: Prof. Jae Yeong Park

M.Sc. in Electrical and Electronic Engineering **2013**
Islamic University, Bangladesh

B.Sc. in Electrical and Electronic Engineering **2011**
Islamic University, Bangladesh

RESEARCH EXPERIENCE

Postdoctoral Research Associate **Aug 2026–Present**
Department of Nuclear, Plasma, and Radiological Engineering, University of Illinois Urbana-Champaign
- Developing TENG-based self-powered sensing approaches for cyber-physical monitoring of a thermal-hydraulic two-tank research testbed.
- Integrating commercial level, flow, and pressure sensing with high-speed triboelectric signal acquisition for condition monitoring and digital-twin/virtual-replica research.
- Designing steady-state, transient, and fault experiments to compare self-powered sensing signatures against conventional instrumentation.
- Working across sensor hardware, signal conditioning, embedded acquisition, and data-driven analysis to support intelligent monitoring of engineering systems.

Postdoctoral Research Associate **Dec 2022–Nov 2024**

Departments of Mechanical Science & Engineering and Food Science & Human Nutrition, University of Illinois Urbana-Champaign

- Designed wearable sensing systems integrating flexible sensors, embedded electronics, wireless data acquisition, and signal processing.
- Developed triboelectric sensing platforms for biomechanical monitoring of frailty, fall risk, human motion, and healthcare applications.
- Led sensor fabrication, hardware integration, calibration, reliability testing, and application-level validation.
- Mentored undergraduate researchers on wearable sensing systems using flexible PCBs and Bluetooth-enabled modules.

Postdoctoral Brain Pool Fellow **Sep 2019–Dec 2022**

Advanced Sensor and Energy Research Laboratory, Kwangwoon University, South Korea

- Designed and validated wearable triboelectric and hybrid transducers for human-motion sensing, self-powered electronics, and environmental energy harvesting.
- Integrated MXene, MOFs, electrospun nanofibers, and stretchable polymers to improve electrical output, durability, and sensing reliability.
- Led iterative prototyping, experimental characterization, system integration, publication development, and graduate-student mentoring.
- Collaborated with industry on wearable healthcare sensing applications.

Graduate Research Assistant **Sep 2014–Oct 2019**

Advanced Sensor and Energy Research Laboratory, Kwangwoon University, South Korea

- Developed electromagnetic-triboelectric-piezoelectric hybrid nanogenerators and Halbach-array energy harvesters for low-frequency human motion.
- Performed device design, theoretical modeling, fabrication, electromechanical characterization, and practical demonstrations for wearable and portable electronics.

TEACHING AND MENTORING EXPERIENCE

Research Mentor, University of Illinois Urbana-Champaign Dec 2022-Nov 2024

- Mentored REU and undergraduate students on smart textile fabrication, triboelectric systems, and signal processing.
- Delivered guest lectures on TENGs, energy harvesting, and embedded interfaces.

Senior Design Mentor, Department of Electronic Engineering, Kwangwoon University, South Korea Jan 2015-Nov 2022

- Assisted in labs and lectures for Introduction of Micro/Nano Engineering, Microsystem Packaging Engineering, Electromagnetics, and MEMS Fabrication.
- Led student workshops on COMSOL, FEM analysis, MATLAB, and sensor prototyping.
- Planned and conducted weekly small lecture-style classes every Spring semester for senior design students.
- Mentored capstone projects that resulted in multiple peer-reviewed journal articles and conference proceedings.

RESEARCH GRANTS & FUNDING EXPERIENCE

- Brain Pool Program, National Research Foundation of Korea / Ministry of Science and ICT, Grant 2020H1D3A1A02081280, ~201 million KRW, 4 years. Role: Postdoctoral Fellow.
- Project focus: smart textile/fabric-based hybridized energy harvesters for self-powered sensors and wearable/portable electronics.
- Basic Science Research Program, NRF Korea, Grant NRF-2020R1A2C2012820, ~810 million KRW, 4 years. Role: Research Associate.
- Contributed to additional Korean government-supported projects involving RF MEMS, IoT, and wearable multisensor systems.

TECHNICAL EXPERTISE

- Sensor and harvester design: triboelectric, piezoelectric, electromagnetic, and hybrid transducers; electromechanical testing and optimization.
- Fabrication: electrospinning, solution casting, laser patterning, textile coating, flexible/nanocomposite integration.
- Embedded systems and IoT: wireless sensing modules, real-time acquisition, system integration, event-driven processing.
- Materials characterization: SEM, EDS, XPS, XRD, Raman, FTIR, dielectric analysis.
- Modeling and software: COMSOL Multiphysics, FEMM, MATLAB, LabVIEW, Origin.
- Wearable sensing: gait, frailty, motion tracking, biosignal acquisition, remote monitoring, human-subject deployment.

SELECTED SCHOLARLY HIGHLIGHTS

- 44 journal publications, including work in Advanced Science, Advanced Energy Materials, Advanced Functional Materials, Nano Energy, Applied Energy, ACS Applied Materials & Interfaces, and related journals.
- 14 conference presentations, including IEEE MEMS, Transducers, PowerMEMS, IEEE NEMS, NanoKorea, and the Design of Medical Devices Conference.
- 3 Korean patents in electromagnetic and hybrid energy harvesting technologies.
- 6 journal cover features associated with work on triboelectric, hybrid nanogenerator, and self-powered sensing systems.

PATENTS

Electromagnetic harvester using magnet springs, Registration No. 10-2017-0000857, 2017.01.03

Hybrid electromagnetic and sliding energy harvester using multiple magnets and PDMS arranged with double halbach array, Registration No. 10-2017-0097050, 2017.07.31

Non-resonant high power hybrid energy harvester, Registration No. 10-2018-0078849, 2018.07.06

AWARDS & SCHOLARSHIPS

Brain Pool Fellowship (BPF), National Research Foundation of Korea, 2020–2023

Best Poster Award, International Conference on Nanogenerators and Piezotronics, 2018

Student Travel Grant, IEEE MEMS 2018, Transducer Research Foundation, UK, 2018

Graduate Research Scholarship, Kwangwoon University, South Korea, 2014–2016
